

Environmental policy

Skellefteå Kraft shall work to promote sustainable energy productions and contribute to the growth and development of the municipality.

The environmental policy is based on Skellefteå Kraft's core values and describes the company's environmental work. It shall also contribute to Skellefteå Kraft's reputation and its efforts to be the industry's best employer. The policy applies to employees, suppliers and contractors involved in Skellefteå Kraft's business operations.

For us this means that:

- Our environmental work shall generate both business and environmental utility through the development and production of renewable energy, sustainable energy solutions, efficient use of resources and the safe handling of environmentally hazardous products and hazardous waste.
- All management, production and distribution of energy and raw materials shall, from a regional and global perspective, be done with environmental considerations in mind.
- Our environmental work shall be characterised by improved efficiency and constant improvements, as well as the prevention of environmental accidents.
- Legislation and other regulations are treated as a minimum level. Measures are determined by what is technically possible, financially sound and justified from an environmental and energy standpoint.
- We set goals for our environmental work and follow up on and present the results.
