

Summary of the contractual terms and conditions for business customers

This summary of the contractual terms and conditions applies to the sale of electricity. These terms and conditions apply between your company and Skellefteå Kraft. If you need to contact us, you can do so by telephone on 0910-77 25 00, via chat or by email.

Skellefteå Kraft will communicate with you mainly by email. It is your company's responsibility to ensure that Skellefteå Kraft has an up-to-date and valid email address.

Fixed electricity price

A fixed-price electricity contract means that the price per kWh remains unchanged throughout the fixed term of the contract.

The fixed price includes the cost of electricity and electricity certificates. A fixed monthly charge applies and is stated in the contract confirmation.

A fixed-price contract has a fixed term for the period you have chosen – 1, 2 or 3 years – but no notice period.

If a fixed-price contract is terminated early, before the contract's end date, Skellefteå Kraft will charge a penalty fee.

If you do not make a new choice when your fixed-term contract expires, you will be allocated a quarter-hourly rate that will remain in force until further notice, with no notice period.

Variable Quarter-hour pricing

A contract with quarter-hour pricing is valid until further notice, i.e. with no fixed end date. The final electricity price is based on the electricity price quoted by the Nordic electricity exchange, Nord Pool, for

the relevant electricity zone per quarter-hour.

In order to be eligible for Variable Quarter-hour pricing, premises must be fitted with metering equipment that enables electricity consumption to be measured on a quarter-hourly basis. In the event that supply under the contract commences before the premises have been adapted, supply will initially be provided in accordance with the terms and conditions for the "Variable Average Spot Price" product until the change has been implemented by the electricity grid operator. By signing this contract, the customer agrees that the quarter-hour pricing will apply once the property has been adapted for it.

In addition to the Variable Quarter-hourly price, there is a surcharge, an electricity certificate fee and a monthly fee, as set out in the contract confirmation.

A contract with Variable Quarter-hourly pricing may be terminated without penalty.

Variable Average spot price

A contract with variable electricity pricing is valid until further notice, i.e. with no fixed end date.

The final electricity price is calculated monthly in arrears and consists of a volume-weighted average of the spot prices from Nord Pool for the respective electricity zone. The spot prices are weighted together with the combined quarter-hour profiles for all of Skellefteå Kraft's facilities within the respective electricity zone. In addition to the variable electricity price, there is a surcharge, an electricity certificate fee and a monthly fee, as set out in the contract confirmation.

A contract with variable electricity pricing can be terminated without penalty.

Mixed price contract

A "mixed price contract" is a form of agreement in which the parties have agreed on a split between Fixed and Variable Quarter-hourly pricing. The contract is for a fixed term and remains in force until the agreed end date, with no notice period.

If the Company does not make a new choice when the fixed-term contract expires, the Company will be allocated a Variable Quarter-hourly rate that will remain in force until further notice, with no notice period.

Production agreement

The agreement is binding on both parties and remains in force for the agreed term. For the agreement to be valid, the Company must have a valid electricity supply contract with Skellefteå Kraft that covers its entire consumption requirements.

The agreement may be terminated by either party with one month's notice.

If the Company does not make a new choice when the fixed-term contract expires, the Company will be assigned a non-fixed-term contract at the compensation level applicable at that time.

Compensation for surplus electricity fed into the grid

In cases where the electricity user begins to generate electricity and Skellefteå Kraft becomes obliged to accept it, compensation shall be paid via a self-billed invoice twice a year.

Assignment contract

Businesses assigned Skellefteå Kraft as their supplier are automatically charged a variable electricity price – the average spot price – which applies until further notice.

When will the electricity be supplied?

The supply of electricity will commence on the start date agreed between you and Skellefteå Kraft in accordance with the contract, provided that you have supplied complete and accurate details.

Prices and payment

Invoices are issued monthly in arrears, and Skellefteå Kraft must receive payment from the Company no later than the due date. In the event of late payment, Skellefteå Kraft has the right to charge penalty interest, a reminder fee and, where applicable, a debt collection fee. Invoicing is based on meter readings collected and reported by the electricity grid operator. If meter readings are not available, the Company may be invoiced based on estimated consumption.

Current prices for customers with
estimated consumption of up to 300,000
kWh are available at skekraft.se.

Termination and amendments to your contract

The Company may not amend the contract without Skellefteå Kraft's approval. If the Company fails to fulfil the contract for any reason other than permanent relocation, Skellefteå Kraft is entitled to compensation consisting of direct financial losses resulting from early termination.

For contracts that are not fixed-term, Skellefteå Kraft is entitled to amend the surcharge and the monthly fee with 15 days' notice.

The contract may not be transferred without the written consent of both parties.
